

Loop-Based Presence Platform: Partner Brief

Symbolic Infrastructure for Toys, Places, and Digital Worlds

Introduction: How This Is Possible

Recent advances in lightweight cryptographic hardware, embedded NFC, and time-based one-time passwords (TOTP) have made it possible to encode trust, presence, and relationship memory into objects and experiences. Where once these interactions required cloud servers or complex identity systems, we now have tools that can function offline, securely, and with user-controlled consent.

What this means is simple but profound: toys, places, and people can now participate in secure symbolic rituals—recognizing when someone was present, when a relationship was formed, and how that memory can be unlocked again later.

We've built this platform not just as a tech solution, but as a cultural invitation: to design objects and spaces that remember us, respond to us, and grow with us.

Technology Overview

The Loopverse platform transforms physical presence and real-world relationships into digital interactions through lightweight, embedded tech:

- **TOTP Trust Loops:** Time-based cryptographic pairings between devices, people, and places
- **NFC-Enabled Tokens:** Souvenirs or accessories that carry encrypted memory of moments
- **ESP32 Anchors:** Low-cost hardware for site-based activation (e.g., kiosks, installations)
- **Synaptic Filters:** Dynamic modulation of toy/app behavior based on relationship strength and timing

All interactions are consent-based, privacy-first, and symbolically rich.

Platform Access: looptloop.io

All loop interactions are powered by a lightweight, open API infrastructure available via looptloop.io. This includes: - Loop pairing & consent protocols - Token memory encoding & decoding - Presence validation via kiosk or mobile - Developer SDKs for rapid toy, app, or kiosk integration

The platform provides both core services and customizable extensions for brand-specific rituals and interactions.

💰 Approximate Unit Costs (10k Units)

Component	Unit Cost (Est.)	Notes
NFC Token (NTAG215 Sticker)	\$0.35–\$0.50	Passive, write-once or loop-rewritable
NFC Charm (Acrylic/Plastic)	\$0.75–\$1.25	Branded trinkets with embedded NTAG215
ESP32 BLE + NFC Mini Station	\$3.50–\$5.00	For retail/event presence anchors
ESP32 BLE + LEDs (Toy Embed)	\$2.50–\$4.00	Feedback-capable module for embedded toys
Loop Wallet Mobile SDK	<\$0.05 (scaled)	App SDK for token read/write + loop logic

Vertical Pitches

Mattel: “Pairable Play” Across Brands

- Add “Best Friend Mode” to Barbie, Monster High, or Hot Wheels
- Pair dolls, vehicles, or accessories via loopable charms
- Reward multi-user engagement: twin packs unlock content when paired
- Optional: loop tokens writeable via companion app or in-store kiosk

Why it fits: Adds cooperative play, collection dynamics, and story depth without screens.

Niantic: Ritualized IRL Activation

- Field Echo + Loop Anchors enable presence-based game unlocks
- Players receive memory tokens for visiting sponsored locations
- Events include on-site glyph scanning and physical souvenir loops

Why it fits: Strengthens IRL engagement with symbolic, consent-based verification—perfect for urban adventures and branded ARGs.

Roblox: Consent-Based Game Unlocks

- Loop tokens unlock exclusive in-game content (e.g. badges, levels)
- Real-life friend pairings create verified co-op power-ups
- Ritual portals that only open after a loop event (e.g. toy-tap, site visit)

Why it fits: Provides secure, physical-to-digital crossover tools for developers, enhances UGC ecosystem with verified symbolic input.

Yoto/Toniebox: Memory-Rich Audio Tokens

- NFC tokens store personalized ritual memories or audio glyphs
- Loop-based activation unlocks special soundscapes, bedtime stories, or family messages
- Tokens glow/vibrate when looped with others (e.g., long-distance rituals)

Why it fits: Deepens the emotional and interactive layer of existing hardware with shareable, programmable memories.

Lego / Disney: Symbolic Worldbuilding Kits

- Loopable bricks or tokens form access keys in story-based sets
- In-park or in-store rituals imprint meaning into buildable worlds
- Combine site-based presence anchors with home play experiences

Why it fits: Enhances imaginative play through symbolic permanence and branded narrative rituals. Merges collectible physical and unlockable digital layers.

Let's co-create the ritual-powered internet of play.
